### 1996 FG10.3

分數 
$$\frac{p}{q}$$
 已化成最簡形式。若  $\frac{7}{10} < \frac{p}{q} < \frac{11}{15}$ ,當中  $q$  是最小可能正整數,

且c = pq,求c的值。

The fraction  $\frac{p}{q}$  is in its simplest form. If  $\frac{7}{10} < \frac{p}{q} < \frac{11}{15}$  where q is the smallest

possible positive integer and c = pq. Find the value of c.

### 1997 FG4.3

已知m及n為兩個不大於10的自然數。若c為m及n滿足方程mx = n之

組數,其中
$$\frac{1}{4} < x < \frac{1}{3}$$
。求  $c$  的值。

It is given that m and n are two natural numbers and both are not greater than 10. If c is the number of pairs of m and n satisfying the equation mx = n, where  $\frac{1}{4} < x < \frac{1}{3}$ , find the value of c.

## 2005 HI1

若 
$$p$$
 和  $q$  是正整數且  $\frac{96}{35} > \frac{p}{q} > \frac{97}{36}$  , 求  $q$  最小可能的值。

Suppose p, q are positive integers and  $\frac{96}{35} > \frac{p}{q} > \frac{97}{36}$ ,

find the smallest possible value of q.

## 2010 HG7

設 
$$m, n$$
 為正整數使得  $\frac{1}{2010} < \frac{m}{n} < \frac{1}{2009}$  。求  $n$  的最小值。

Let *m*, *n* be positive integers such that  $\frac{1}{2010} < \frac{m}{n} < \frac{1}{2009}$ .

Find the minimum value of n.
